Driving scalable software delivery and engineering excellence with over 3 years of back-end development experience, targeting a senior Java Backend Software Engineer role to contribute to solution design, complex problem-solving, system development, and reliable production-ready applications. Backend Software Engineer with experience designing and developing scalable Java and Spring Boot applications, production-grade REST APIs, and microservices for healthcare systems. Developed 150+ APIs and improved backend/API performance by 20–25% through database indexing, query optimization, caching, and code-level improvements; optimized approximately 35 indexes and reduced selected query execution times by up to 60%. Skilled in Java 8/17/21, Spring Data JPA, Hibernate, event-driven systems, Kafka, RabbitMQ, WebSocket, Protobuf, Microsoft Graph integrations, concurrency troubleshooting, and production support. Hands-on exposure to cloud-native deployment, security, resilience, and observability tooling.

PROFILE SUMMARY

- Solutions-focused professional with rich experience in in Java, Spring Boot, Microservices, REST APIs, and SQL**, delivering enterprise solutions across the SDLC, from development and integration to production support.
- Architecturally Strong Engineer, experienced in HLD, LLD, System Design, Object-Oriented Design**, service decomposition, and modular architecture, translating requirements into scalable, maintainable solutions.
- Skilled in API and third-party integrations, service communication**, asynchronous processing, configuration, authentication, and security, with strong troubleshooting capabilities.
- Performance-Driven Problem Solver, experienced in scalability, latency, concurrency, optimization**, debugging, root-cause analysis, and production issue resolution.
- Adaptable Technology Professional with healthcare and real-time application experience**, expanding skills in distributed systems, cloud computing, Generative AI, RAG, and AI-assisted development.

CORE COMPETENCIES

Back-end Application Development	Service Decomposition	Performance Engineering
Software Development Lifecycle (SDLC)	API & System Integration	Database Design & Data Modeling
Requirements Analysis	Distributed Application Development	Root Cause Analysis & Troubleshooting
Technical Solution Design	Event-Driven Processing	Production Support & Incident Resolution
Object-Oriented Programming (OOP)	Concurrency & Multithreading	Code Quality & Engineering Best Practices

TECHNICAL SKILLS

- Programming Languages:** Java 8/17/21, SQL
- Back-end Development:** Spring Boot, Spring Data JPA, Hibernate, REST APIs, Microservices
- Microservices & Design:** Service-Oriented Architecture, Distributed Systems, Event-Driven Architecture, Service Decomposition, HLD/LLD, System Design, OOP, Design Patterns, Strangler Fig, BFF, Gateway Aggregation
- Messaging & Communication:** Apache Kafka, RabbitMQ, WebSocket, Protocol Buffers (Protobuf), gRPC, Event-Driven Architecture
- Security & Resilience:** Spring Security, OAuth2, JWT, Keycloak, Authentication/Authorization, Resilience4j, Circuit Breaker, Retry, Fallback, Rate Limiter, Bulkhead
- Databases:** MySQL, Oracle, SQL Server, H2, SQL/HQL Optimization, Indexing, Database Design, Caching, HikariCP, Pagination
- Cloud ,DevOps & Observability:** AWS, Docker, Docker Compose, Kubernetes, Helm, Maven, Google Jib, Buildpacks, Prometheus, Grafana, Grafana Loki, Tempo, Logging, Metrics, Distributed Tracing
- Development Tools:** Git, Azure Repos, Postman, SonarQube, IntelliJ IDEA, Swagger/OpenAPI, Liquibase
- Software Engineering:** API Design, JWT/OAuth
- Frontend Exposure:** JavaScript, JSP, HTML; Angular and React practice projects (limited recent hands-on experience).

WORK EXPERIENCE

May'23 - Present | Senior Back-end Software Engineer / Spring Developer | Riomed Technologies India Private Limited

Growth Path: Junior Software Developer (May'23 – Aug'26) → Senior Software Engineer (Aug'26 – Present)

Key Result Areas:

- Contributed to microservice and service-oriented architecture initiatives, transitioning monolithic functionality into well-defined, maintainable services.
- Developed back-end capabilities for healthcare workflows spanning medication management, clinical records, referrals, and document management.
- Designed document-management APIs supporting large file uploads and retrieval through chunked processing and controlled temporary-file lifecycle management.
- Integrated Microsoft Graph APIs for Teams and calendar capabilities, resolving backend timezone and integration-related issues.
- Implemented event-driven processing with Kafka and RabbitMQ while troubleshooting concurrency, asynchronous execution, and Java NIO production issues.
- Improved resource utilization and backend efficiency through caching and HikariCP connection-pool configuration alongside database and query optimization.
- Supported the complete development lifecycle using Git, Maven, Postman, SonarQube, Azure Repos, and Swagger/OpenAPI across development, quality validation, and production support.

- Participated in code reviews and technical discussions, identifying implementation risks and promoting clean, maintainable coding practices.
- Investigated production defects using application logs, stack traces, and structured debugging to identify root causes and deliver stable fixes.

Highlights:

- Engineered **150+** production-grade REST APIs using Java, Spring Boot, Spring Data JPA, and Hibernate for healthcare applications.
- Improved backend and API performance by **20–25%** through database indexing, SQL/query optimization, reduced database calls, and application-level improvements.
- Optimized approximately **35** database indexes and slow-running queries, reducing selected query execution times by up to **60%**, from approximately **2 seconds to 800 ms**.
- Optimized paginated data-access workflows by reducing redundant count and data-fetch operations, improving database efficiency for large datasets.
- Streamlined backend processing by eliminating redundant operations and improving data-access patterns through targeted refactoring.

Project Undertaken:

Appointment Reminder Scheduler | Tech Stack: Java, Spring Boot, Spring Scheduler, Cron, Batch Processing

- Developed an automated appointment-reminder workflow that identifies appointments scheduled one week ahead and initiates patient notifications.
- Implemented cron-based scheduling with Spring @Scheduled, dynamically calculating reminder eligibility based on appointment dates.
- Introduced batch processing to efficiently handle multiple eligible appointments and reduce manual reminder operations.
- Designed controlled reminder processing incorporating eligibility validation, notification dispatch, execution logging, duplicate prevention, and failure-handling considerations.

PERSONAL PROJECTS

Algorithmic Trading Platform | Tech Stack: Java, Spring Boot, WebSocket, Protobuf, MySQL

- Architected an event-driven algorithmic trading platform spanning real-time market data, strategy execution, risk management, order processing, position management, and P&L tracking.
- Integrated broker market-data feeds using WebSocket and Protocol Buffers, transforming broker updates into application-level MarketTick events.
- Designed an instrument-master repository supporting efficient lookups by instrument key, trading symbol, underlying, and expiry for option-chain workflows.
- Implemented ATM option selection and dynamic instrument subscriptions using underlying spot prices and option-chain data.
- Built thread-safe market-data caching with ConcurrentHashMap and decoupled market-data ingestion from strategy processing through event-driven dispatch.
- Applied Strategy, Factory, Adapter, State & Facade patterns to create modular trading, order-management, broker-integration & lifecycle components.
- Established strategy-to-execution abstractions through Strategy, StrategyContext, and OrderExecution interfaces, decoupling trading logic from broker-specific execution.
- Implemented paper trading capabilities covering order execution, position management, risk validation, and P&L tracking; live broker execution and production hardening are ongoing.

ACHIEVEMENTS

- **Architecture Ownership:** Translated complex requirements into implementation-ready backend solutions, defining HLD, LLD, service boundaries, integration flows, and technical approaches.
- **System Design Excellence:** Strengthened solution robustness by evaluating scalability, reliability, security, latency, concurrency, and failure scenarios during architectural and technical decisions.
- **Microservice Modernization:** Contributed to evolving monolithic functionality toward service-oriented architecture, establishing clearer service boundaries and reducing architectural dependencies.
- **Complex Problem Solving:** Resolved challenging backend and production issues through structured troubleshooting and root-cause analysis, driving practical and maintainable technical solutions.
- **Production Engineering:** Strengthened production readiness by incorporating resilience, failure recovery, resource management, operational traceability, and maintainability into solution development.

CERTIFICATIONS

- **Microservices and Backend Development**, Udemy | Certificate Verification
- **GitHub Copilot and AI-Assisted Development**

EDUCATION

- **Bachelor of Technology (B.Tech.)**

INTERPERSONAL SKILLS

- Analytical Thinker • Detail-Oriented • Systematic Problem-Solver • Collaborative • Adaptable & Agile • Mentor • Resilient
