

Sahil Kutte

Backend Software Engineer

+91-9545538873 | kuttasahil@gmail.com | Pune, INDIA | Experience: 03 Years 06 Months | Portfolio | [Linkedln](#)

Profile summary

Backend Software Engineer with over 3 years of expertise in designing and developing scalable Java and Spring Boot microservices and RESTful APIs, specializing in healthcare systems. Demonstrated success in delivering 150+ production-grade APIs and migrating monolithic architectures to microservices. Proven ability to enhance backend and API performance by 20–25% through database indexing and query optimization, reducing query times by up to 60% via index refinement. Skilled in event-driven architectures (Kafka, RabbitMQ), real-time communication (WebSocket, Protobuf), and integrations including Microsoft Graph. Proficient in API design, concurrency, system architecture, and production environment optimization.

Skills

Spring Boot

Core Java Programming

Java 8

SQL

Spring Data JPA

Hibernate

Spring Cloud

Spring Security

Microservices

WebSocket

Kafka

RabbitMQ

Protobuf

gRPC

AWS

Rest API Design

Rest API Development

Rest SOAP

Event Driven Architecture

MySQL

Docker

Kubernetes

Helm Charts

Maven

Github

Postman

Sonarqube

Swagger API

Liquibase

Optimization Techniques

Caching Techniques

Design Patterns

Jwt

Oauth

Java Concurrency

Certifications

- Master Microservices with Spring Boot, Docker Kubernetes Udemy
- Microservices / Backend Development Certificate — Udemy

Work Experience

Backend Software Engineer – Riomed Technologies India Private Limited	May 2023 - Present
---	--------------------

- Designed and developed 150+ production-grade REST APIs using Java, Spring Boot, Spring Data JPA and Hibernate for healthcare applications.
- Led migration from monolithic architecture to microservices and service-oriented architecture to improve modularity and maintainability.
- Implemented backend modules for medication, patient clinical records, referrals and document management.
- **Improved overall backend/API performance by 20–25% through database indexing, SQL/query optimization and code-level improvements.**
- **Optimized approximately 35 database indexes and slow-running SQL queries, reducing selected query execution times by up to 60% (for example ~2s to ~800ms).**
- Reduced redundant database round trips in paginated APIs by optimizing count and data-fetch operations and implementing efficient pagination.
- Designed APIs for large document uploads and retrieval including chunked file processing and temporary-file lifecycle management.
- Integrated Microsoft Graph APIs for Teams/calendar functionality and resolved backend timezone-related issues.
- Worked with Kafka and RabbitMQ for event-driven processing and investigated concurrency, asynchronous processing and Java NIO production issues.
- Applied caching, HikariCP connection-pool tuning and other optimizations to improve backend efficiency and resource utilization.

Projects

Cellma Patient Portal	24 Months
-----------------------	-----------

- Developed a patient-centric healthcare portal to efficiently manage patient records, appointments, and clinical workflows using Java, Spring Boot, and Spring Data JPA.
- Implemented robust authentication and authorization protocols with Spring Security, OAuth2, and JWT for enhanced system security.
- Designed and optimized MySQL database schemas and SQL queries to ensure high performance and data integrity.
- Created comprehensive unit tests using JUnit and Mockito to maintain code quality and support continuous integration.

Cellma Referral Portal	12 Months
• Developed a referral management system enabling patient referrals across services using Spring Boot-based RESTful APIs. • Implemented role-based access control with Spring Security (OAuth2/JWT) and optimized SQL queries while ensuring code quality through testing and reviews.	

Algorithmic Trading Platform	Months
• Designed an event-driven trading architecture handling real-time market data, strategy execution, risk management, order execution and positions tracking using Java, WebSocket and Protobuf. • Integrated broker market data feeds and built an instrument master repository for efficient option-chain operations. • Implemented thread-safe market-data caching and separated ingestion from strategy processing for scalability.	

Appointment Reminder Scheduler	5 Months
• Developed a scheduled backend process that identifies upcoming appointments and triggers reminders using Spring Scheduler and batch processing. • Designed eligibility checks, reminder generation, notification dispatch and failure-handling with duplicate-prevention mechanisms.	

Education	2022
Dr.Babasaheb Ambedkar Technology University, Lonare Grade - 8.0/10	

Extra-curricular activities
Technical Participation

Active involvement in coding projects and GitHub contributions demonstrating practical application of backend engineering skills and collaborative development.

Engineering highlights
Achievements

Delivered significant performance improvements (20–25%) via indexing and query optimization; optimized ~35 indexes reducing some query times by up to 60%.
